

AUBO

Collaborative Lightweight Robots

Made for Human Centric
Agile Manufacturing

Versatile—Flexible—User Friendly
Low Cost—Lightweight

NRTAC

i3 6 axis
3kg payload
625mm reach

i5 6 axis
5kg payload
924mm reach

i7 6 axis
7kg payload
1150mm reach

i10 6 axis
10kg payload
1350mm reach

Quick Redeployment

No Programming Skills Needed

AUBO

Collaborative Robots (Co-Bots)

AUBO Robots work closely within the human environment without the need for safety equipment, depending on risk assessment.

COLLABORATIVE FUNCTION:

- Hand guide-to-teach (inverse kinematics motion planning), this manual operation of the robot enables quick and easy programing by demonstration without any programing skills.
- Robot works side by side with human operator without safety fence, laser or sensors (after a risk assessment is performed).
- Teach pendant user interface for programing (forward kinematics) enables online programing and simulation via a touch screen tablet.
- Lightweight, flexible and easy to re-purpose this lightweight robot.

SAFETY FUNCTIONS:

- Designed in accordance with PI d and ISO 10218-1 (ISO/TS 15066) safety requirements and with most all specifications for collaborative robots operation.
- Power and force limiting design brings robot to a protective stop if limits are exceeded or a collision is detected. Speed and force can be adjusted to fit and optimize any application easily.
- Sensors embedded in motor drives provide real-time feedback to prevent dangerous situations.
- Emergency stop buttons are positioned on teach pendant and control box with a braking distance less than 1mm.

OPEN SOURCE ARCHITECTURE:

- CAN bus network used in this robot for multiple microcontrollers to communicate with each other.
- ROS (Robot Operating System) compatibility is supported through an API.
- Hardware adopts BUS protocols with open I/O interface extensions.
- Easily integrate robot into existing production systems.

RETURN ON INVESTMENT (ROI):

- Low cost of ownership without basic programing skills needed, and ease of integration into a system, all add up to a quick return on your investment.
- Short run, high mix environments like Lab automation or machine tending are prime examples of industries needing fast redeployment.
- Floor space is a premium cost at most companies—usually more than the equipment. A small foot print, lightweight robot will be a huge benefit for any size company's cost of production.
- Repurpose, redeploy and/or reinvent applications with the same robot, fast change over for lean manufacturing.
- Remove human error in a high-mix low-volume (HMLV), this reduces manufacturing time and consequently increases capacity; without adding costly resources so robot acts as a de facto quality inspector.

INTELLIGENCE:

- Vision systems can be easily integrated into controller.
- Control Box communication ports include TCP/IP, Modbus RTU/TCP, and USB 2.0
- This research robot platform is used widely around the world in corporate labs and for academic robotics research.

Applications for Collaborative Robots
